Project Summary:

Project – I

Client : A healthcare company
Technologies : React TS, Redux, PL/SQL
Role : Full Stack Developer

Description of Project

- A web application that enables users to send eCards to admitted patients.

Roles and Responsibilities:

- Analyze the software requirement by customer and develop the application as per their requirement.
- Involved in Development of Front-End using Technologies like React TS, Redux
- Developed Test Cases and Unit Testing to identify and resolve integration, functional and usability issues before deployment.
- Assist and support other team members on multiple projects.

Project – II

Client : A healthcare company
Technologies : Angular, .Net
Role : Full Stack Developer, Manual Testing

Description of Project

- An application tailored for managing dialysis patients, offering features to track follow-up appointments, manage medication schedules, and monitor dialysis sessions, ensuring comprehensive and timely care.

Roles and Responsibilities:

- Reviewed and understood requirements to develop the application and to identify testable scenarios.
- Involved in Development using Angular, .Net
- Manually execute test cases, document results, and report any identified defects with detailed descriptions.
- Performed regression testing to ensure new changes don't affect existing functionality.

**EDUCATIONAL QUALIFICATION:**

- B.TECH Information Technology from Dr Mahalingam College of Engineering and Technology, Pollachi. (2023)
