

SREEKEERTHANA BATHINA**Professional Summary:**

- 4 years of experience in development using Microsoft Technologies.
- Showcasing significant knowledge in software development, encompassing the creation of Web API's for microservices, coupled with adeptness in gathering requirements and implementing solutions.
- Proficiency in C#, .Net 6.0, ASP.net, Angular, HTML and SQL Server, CCL(Cerner Command Language).
- Healthcare Domain knowledge which includes coinsurance, deductible, claim, patient responsibility and benefits.
- Proficient in quickly understanding new concepts and collaborating seamlessly within teams, skilled at meeting deadlines, and managing pressure while maintaining meticulous attention to detail. Capable of accomplishing tasks promptly.

Technical Skills:

- Programming : C#, ASP.Net
- Relational Databases : MS SQL, MY SQL Server , CCL
- Integrated Development Environments : MS Visual Studio
- Project Management Tool : Git, JIRA
- Platforms : MS Windows XP/ 7/8/10
- Architecture : Aggregator design pattern in Mirco-service
- Application Server : NGINX

Working Experience:

Company Name	: KANINI SOFTWARE SOLUTIONS
Designation	: Associate
Duration	: August 2021- Till date

Project Summary:

Project – I

Client : A Healthcare technology company
Technologies : ASP .Net, C# .Net, Entity Framework, AWS,Postman, SQL Server
Role : Full-stack developer

Description of Project:

An API which acts as interface between payer and provider. It will estimate coverage amount and patient responsibility based on 271 response and rules stored in the database. It saves a lot of time for provider office.

Roles and Responsibilities:

- Analyze the software requirement by customer and develop the application as per their requirement.
- Involved in Design, Development Web Services using IIS ,SQL Server, C# and .Net framework.
- Developed Stored procedures in SQL Server.
- Verifying that the code coverage reaches 85% post the integration of new functionalities into the micro service through the addition of unit test methods.
- QA validation of the other developer stories in absence of tester.
- Involved in deployments till Production.
- Deploying the tickets to production within the sprint time frame.
- Gave demo's to clients in every sprints what I developed.
- Resolving issues that arise during ECS deployment in the CI/CD pipeline.

Project – II

Client : A Healthcare technology company
Technologies : C# and .Net Framework, Angular, Bitbucket, Jira, Snowflake
Role : Full-stack developer

Description of Project:

Contributed to the development and maintenance of a full-stack healthcare application, including production support and bug resolution. Implemented features for patient data management, workflow automation, and system enhancements, ensuring high application stability and performance.

Roles and Responsibilities:

- Developed and enhanced CCL (Cerner Command Language) scripts to support healthcare workflows and data processing.
- Resolved production defects and critical incidents, ensuring high system availability and reduced downtime.
- Production support, handling critical issues and ensuring system stability
- Worked on full-stack development using Angular (frontend) and C#/.NET 6 (backend)
- Collaborated with cross-functional teams to deploy fixes and improvements in production environments
- Improved application performance and reliability through efficient debugging and optimization techniques

**EDUCATIONAL QUALIFICATION:**

- B.Tech in Computer Science and Technology (2021) from N.B.K.R Institute of Technology, Nellore, Andhra Pradesh.
