PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with 2+ years of experience operating AWS and Azure infrastructure in production healthcare environments. Specializes in Infrastructure as Code (Terraform), Kubernetes/EKS cluster management, CI/CD pipeline automation, and containerized microservices deployments. Proven ability to maintain SLOs for system availability and latency, reduce deployment lead times, and bridge development and operations teams through GitOps practices, observability tooling, and blameless postmortem culture. Creator of CloudOps Command Center — an open-source cloud operations platform providing unified deployment governance, Kubernetes visibility, and AI-assisted incident investigation.

WORK EXPERIENCE

Kanini Software Solutions

Apr 2024 – Present

DevOps / Cloud Engineer

Chennai, India

- Engineered reusable Terraform modules for Azure infrastructure (App Services, Key Vault, Storage Accounts, PostgreSQL), reducing environment provisioning time by ~60% and eliminating configuration drift across dev and QA.
- Built and maintained GitHub Actions and Azure DevOps CI/CD pipelines for .NET microservices, enabling zero-downtime deployments and cutting manual release effort by ~70%.
- Operated EKS clusters in production — managing node group lifecycles, IAM role bindings, add-on version compatibility, and Kubernetes upgrade sequencing; resolved control-plane-to-node version mismatch incidents post-deployment.
- Containerized and deployed .NET microservices with Docker across EKS, K3s, and KIND environments; managed workloads using kubectl, YAML manifests, and Helm charts.
- Implemented Datadog and CloudWatch dashboards and alerting for Lambda, EC2, and EKS cluster health monitoring; reduced mean time to detection (MTTD) for production incidents.
- Provisioned and managed AWS and Azure infrastructure using Terraform and Bicep; enforced IaC standards and configuration management practices for consistent, repeatable deployments.
- Applied security best practices across all deployments: IAM least-privilege policies, secrets management via Key Vault, and DevSecOps controls in CI/CD pipelines.
- Participated in on-call rotations, incident response, blameless postmortems, and root cause analysis (RCA) to maintain SLOs for system availability and latency.
- Collaborated with dev teams to resolve deployment failures, cloud misconfigurations, and environment parity issues; documented processes and runbooks for knowledge sharing.
- Supported PostgreSQL and MS SQL Server backends including stored procedure debugging, query optimization, and database connectivity for ASP.NET Core REST APIs.

PROJECTS

CloudOps Command Center (Open Source)

2026 – Present

React · ASP.NET Core · PostgreSQL · Kubernetes · Terraform · GitHub Actions · ArgoCD github.com/siddharth20s/cloudops-command-center

- Built a cloud operations platform providing a unified view of applications, environments, deployments, Kubernetes workloads, incidents, and infrastructure health.
- Designed a Clean Architecture backend with RBAC, audit logging, deployment governance, and environment management capabilities for cloud-native applications.
- Automated infrastructure provisioning and GitOps-based deployments using Terraform, GitHub Actions, Kubernetes, and ArgoCD — enabling repeatable, auditable release workflows.
- Implemented observability stack with Prometheus, Grafana, and Loki, enabling real-time monitoring, deployment correlation, and operational insights across environments.
- Developed an AI assistant that combines deployment, infrastructure, and application telemetry to accelerate incident investigation and root-cause analysis.

Healthcare Cloud Infrastructure Automation Platform

2024 – 2025

Terraform · Azure · Bicep · Azure DevOps · PostgreSQL

- Developed modular Terraform infrastructure for dev and QA environments, provisioning Azure App Services, Storage Accounts, Key Vaults, and managed databases with full IaC lifecycle management.
- Built Azure DevOps CI/CD pipelines with Terraform plan/apply gates, environment approvals, and rollback mechanisms — reducing manual provisioning effort by ~65%.

AWS Production Operations & EKS Support

2024 – 2025

AWS · EKS · EC2 · Lambda · CloudWatch · Jenkins · Docker

- Managed production EKS clusters for healthcare workloads: node group lifecycle, add-on upgrades, IAM configuration, and pod-level troubleshooting across namespaces.
- Investigated production incidents using CloudWatch Logs Insights and container-level debugging; authored runbooks to reduce future resolution time.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- HashiCorp Certified: Terraform Associate (TF-004)

EDUCATION

Francis Xavier Engineering College, Tirunelveli

B.E. in Electronics & Communication Engineering

Graduated 2023

CGPA: 8.67 / 10.0

SKILLS

Cloud: AWS (EKS, EC2, Lambda, IAM, VPC, S3, RDS, CloudWatch) · Azure (App Services, Key Vault, AKS, Storage, EntraID)
IaC & Config: Terraform · Azure Bicep · CloudFormation · Helm · kustomize · configuration management
Containers & Orchestration: Docker · Kubernetes · EKS · AKS · K3s · KIND · kubectrl · ArgoCD
CI/CD & Automation: GitHub Actions · Azure DevOps · Jenkins · GitOps
Monitoring & Observability: Datadog · CloudWatch · Prometheus · Grafana · Loki · SLO/SLI/SLA · incident response
Languages & Dev: Python (Boto3, Azure SDK) · Bash · TypeScript · YAML · ASP.NET Core · REST APIs
Databases: PostgreSQL · MS SQL Server · Azure SQL · stored procedures · query optimization
Security: IAM least-privilege · secrets management (Key Vault) · DevSecOps · security best practices
